- 4. Push Mount
- 5. Clear plastic tab
- 6. Rigid plastic tab
- 7. Aluminum ring
- 8. Spring
- 9. Spring clip
- 10. Flange
- 11. Green strap
- 12. Handle for industrial filters
- **13. Embossing** The filter can be embossed to give it some relief and allow it to fit a specific system.

14. Folding

The filter can be folded according to the desired angle by the customer, to allow it to fit a specific system.

15. Plastic film

A plastic film can be placed on the frame to preserve the brushed finish of the aluminum or to protect the stainless steel.

16. Clip for industrial filters

Large industrial filters may be made in two parts, attached together by this clip. Available in steel, stainless steel and aluminum.

Display pack

A display pack giving specifications about the filter (product no., instructions, etc.) can be attached to the filter.

Packaging

The filters can be packaged individually or in multi-packs in a box or plastic bag, with or without specific identification.

Labeling

A label indicating the certification, product no. or any other information can be affixed on the filter.

Sticker

A sticker indicating the direction of airflow can be affixed on the filter.

Brushed frame

The aluminum frame can be brushed to give it a high-end look.

Hole

The frame can be perforated to facilitate drainage of the filter or any other needs.
